WORK NOTICE

INSTALLATION OF GROUNDWATER EXTRACTION AND MONITORING WELLS ON GOLDEN WEST LANE, NORCO

Wyle Laboratories Site, 1841 Hillside Avenue, Norco

Installation activities will begin early December 2010, from 7:00 a.m. and 5:00 p.m., during weekdays and take about 2 weeks to complete.

November 8, 2010

To: Residents of Golden West Lane

You may recall environmental investigation of the Former Wyle Laboratories (Wyle) site identified groundwater contaminated with trichloroethene (TCE) and other chemicals. As an interim remedy, the Department of Toxic Substances Control (DTSC) directed Wyle to install a network of groundwater extraction and monitoring wells and associated piping on-site known as the Hydraulic Containment System (HCS). Construction of the HCS started in late 2007 and the system began operation in March 2008. This system was designed to reduce the amount of groundwater leaving the northern boundary of the site by pumping contaminated water out of the ground and treating the water on-site.

DTSC has directed Wyle to expand the HCS on-site as well as partially down Golden West Lane to broaden the groundwater extraction system to ultimately reduce TCE levels in groundwater. The expansion will require the installation of four groundwater extraction wells and two monitoring wells on Golden West Lane, plus three extraction wells on-site (see Figure 1). Installation of the extraction and monitoring wells will require the use of a drill rig and support truck on Golden West Lane, which will obstruct half the width of the road and may temporarily block access to certain driveways (during daytime hours). In addition to the drilling, a single trench excavation will originate from the site boundary and extend as far as 2337 Golden West Lane (about half-way down the

Figure 1

eastern side of the road) to accommodate double-walled piping to connect to each of the four extraction wells. At the end of each work day all equipment will be removed and any open holes or trenches will be temporarily covered with trench plate. The trench will be backfilled, compacted, and re-paved to City of Norco standards. All installed extraction and monitoring wells will be covered with a flush-mounted well box cover.

What's Next?

Prior to start of any drilling or installation work, an encroachment permit will be obtained from the City of Norco and all known utilities will be identified by third party contractors.

To avoid interruptions during holidays, work is anticipated to start in early December 2010 and may take approximately two weeks to complete. Work is not expected to require access to private property. Work will be performed Monday through Friday between 7:00 a.m. and 5:00 p.m., in compliance with the City of Norco Municipal Code.

DTSC recognizes the temporary inconvenience the installation work may cause however, we believe this groundwater installation work is necessary to further protect residents and public health and the environment.

DTSC Contacts

If you wish to talk to or personally meet with DTSC representatives about this upcoming installation work, please contact: the following project staff to set up an appointment:

Rafat Abbasi, Senior Project Manager
Department of Toxic Substances Control
5796 Corporate Avenue
Cypress, CA 90630-4732
(714) 484-5449
E-mail: Rabbasi@dtsc.ca.gov

Stacey Lear, Public Participation Specialist
Department of Toxic Substances Control
5796 Corporate Avenue
Cypress, CA 90630-4732
(714) 484-5354
E-mail: Slear@dtsc.ca.gov

Thank you for your continued support as we continue our oversight of the Wyle site throughout the groundwater remediation process. For more information about the Wyle site visit www.EnviroStor.dtsc.ca.gov. For more information about DTSC, visit www.dtsc.ca.gov.
